DISASTER RECOVERY, DIGITAL TRANSFORMATION, AND APPSEC CHALLENGES IN 2021

March 23, 2021

3:00 PM-4:15 PM

Central Standard Time (CST)

Although healthcare organizations may have to confront a ransom this year, the challenges they face are rapidly expanding beyond data availability since they were forced to digitally transform their businesses and operations overnight. To stay abreast of the new challenges, rapid application development and deployment are imperative to serving their now-online communities. This fact has expanded the risk landscape beyond the traditional ransom-based hacks they contend with daily as their online applications and services are increasingly being targeted for exploitation.
