WHEN THE RUBBER MEETS NETWORK APIS. WHY CONNECTIVITY IS THE NEW HORSEPOWER FOR THE AUTOMOTIVE INDUSTRY

May 21, 2025

3:00 PM-4:15 PM

Eastern Time

The automotive world is racing toward a smarter, more connected future, but one essential piece remains missing from the stack: network APIs. This panel dives into how programmable networks are becoming mission-critical for modern mobility. Whether it's about keeping vehicles updated, navigating dense cities, or delivering seamless in-car experiences, network APIs are the engine behind it all.

Autonomous driving and teledriving – where ultra-reliable, low-latency connectivity is essential, especially in congested or complex environments Over-the-air (OTA) updates – ensuring secure and complete software delivery, boosted by network quality of service controls Reliable device and vehicle location – especially in urban canyons, indoors, and parking structures where GPS alone falls short In-car entertainment – from video streaming to real-time contextual services, tied to connectivity status and driving conditions Whether you're building the next-gen vehicle or the infrastructure that powers it, this conversation will help you understand why the road to automotive success is paved with network APIs.
