

# The Future of IT & Cybersecurity CXO Think Tank

## SPEAKERS

**Grace Beason**  
Director of  
Governance, Risk  
and Compliance  
Guidewire Software  
Inc

**Alex Cunningham**  
CISO  
Advisor360

**Brian Haugli**  
CEO  
SideChannel

**Mark Maybury**  
VP,  
Commercialization,  
Engineering &  
Technology  
Lockheed Martin

**Gene Daigle**  
Director Information  
Security  
Lupl

**Larry Weber**  
VP Product  
Marketing  
Veracode

**Yotam Segev**  
Co-Founder & CEO  
Cyera US Inc.

**David Bullas**  
Director of Sales  
Engineering  
Authomize

**Matt Tesauro**  
Distinguished  
Engineer/Director  
Security Evangelist -  
Global  
Noname Security

**Sumit Nagpal Ph.D.**  
Co-Founder/CEO/CTO  
Cherish Health

**Ganesh Pai**  
Founder & CEO  
Uptycs

**Blake Atkinson**  
Director of  
Infrastructure  
Security  
Cloudflare

**Alon Levin**  
VP of Product  
Seraphic Security

**Shirish Ranjit**  
Sr Enterprise  
Architect  
Fortune 500 Private  
Sector

**Brian Haugli**  
CEO  
SideChannel

**Shirish Ranjit**  
Senior Enterpris  
Architect  
Staples Inc.

## KEYNOTE PANEL

1:05 PM-2:00 PM

# Security Controls: Measuring Efficacy for the Business Growth

The industry is spending record amounts on cybersecurity tooling, but somehow CISOs still are at times left scrambling to respond to the vulnerabilities like Log4j. Assuming that these types of critical and far-reaching events are inevitable, how can CISOs further improve their organization's preparedness for future cyberattacks?

This panel will discuss potential strategies for determining the critical security controls - both technology and behavioral - that can minimize cyber-risks and give the organization the competitive advantage to grow and innovate. We will explore frameworks for measuring the efficacy of cybersecurity investments, and KPIs that show the board the investment is safeguarding the company's digital infrastructure for the long term.

### CHAIR

**Brian Haugli**  
CEO  
SideChannel

### PANELISTS

**Tony Parrillo**  
Global Head of  
Security  
Schneider Electric

**Mark Maybury**  
VP,  
Commercialization,  
Engineering &  
Technology  
Lockheed Martin

**Ganesh Pai**  
Founder & CEO  
Uptycs

2:00 PM-2:35 PM

# Application Security in a DevOps, Cloud and API World

Security teams are challenged to modernize application security practices in light of accelerating shifts to DevOps delivery models and rapid adoption of cloud-native application designs. Applications built on microservices (e.g. serverless, containers, APIs) and delivered continuously are outpacing application security teams ability to secure them. CISOs need to consider new skills, new touch points and new platforms to maintain a strong security posture in light of these trends and the speed at which they are re-shaping IT.

# Secure Your Browser - the Most Commonly Used and Vulnerable Application

In recent years, users have migrated from the office and are now working from everywhere and the resources the users need access to have also migrated from their desktops and data-centers to the cloud. The browser has become the de-facto tool for performing almost any action. Unfortunately, risks and threats to the browser are continuously on the rise, The browser is exposed to multiple types of threats and adversaries are increasingly targeting the browser to achieve their nefarious goals.

Join Seraphic VP of Product Management Alon Levin to learn about the threats to browsers and how to ensure secure browsing and prevention of policy infringements in the browser across all users, in all platforms and in every browser.

The session will review how security teams detect and mitigate browsers risks such as:

- Browser vulnerability exploitation
- Phishing
- Intentional or unintentional data leak
- Additional web-based attacks

## PANEL

3:05 PM-4:00 PM

### The Greatest Fears?

The biggest fear is not the technology, it is the potential of human error that could expose your organization to a cyberattack. The majority of CISOs agree that an employee carelessly falling victim to a phishing scam is the most likely cause of a security breach. Most also agree that they will not be able to reduce the level of employee disregard for information security. How do we guard against human error without limiting employee efficiency and productivity?

## CHAIR

Cloudflare

## DISRUPTOR

4:05 PM-4:20 PM

### Guarding the Doors: Navigating Risk From Third-Party Code

Open source libraries are widely leveraged by developers. In fact, 97 percent of the typical Java application is made up of open source libraries. But nearly 80 percent of developers never update third-party libraries after including them in codebase.

What does this mean for your applications? There is a good chance that your third-party libraries have undetected vulnerabilities. Scary, right?

The good news is that when alerted to vulnerabilities in open source libraries, developers tend to act quickly. This is especially true when developers understand how the vulnerability could impact their application.

Join us as we review our annual study on open source libraries, State of Software Security (SOSS) v12: Open Source Edition. We will explore the most popular open source libraries, how libraries are evaluated and selected, and how to eliminate risk by fixing vulnerabilities.

### 5 Steps to Securing Identity and Access for Everything in the Cloud

4:35 PM-4:50 PM

Identity and Access are under attack. The only way to protect the identity layer from risks and threats is to continuously monitor identities, assets, access privileges, and activities across cloud environments.

Join Authomize Director of Sales Engineering David Bullas, to learn about the 5 steps you need to take to ensure that your Cloud Identity and Access is secure and in compliance with standards and regulations. The session will review how security teams detect and mitigate Identity and Access risks such as:

Excessive Access exposing what you build in AWS

Identity lifecycle risks including partial offboarding

IdP risks including password stealing and user impersonation

## PANEL Cloud Data Security

4:55 PM-5:50 PM

According to Gartner, 79% of companies have experienced at least one cloud data breach during the pandemic. But the migration of critical business data to the cloud shows no sign of slowing. In fact, it's accelerating. Yet, despite powerful trends and mounting threats, traditional data security has simply not kept pace with the cloud. Security teams still struggle to even understand the reality of what sensitive data they have in the cloud and its associated risks. This is not a sustainable status quo. Data is increasingly a business most valuable asset. And until organizations can align around a shared Data Reality, cloud security will remain several steps behind intensifying

security threats and tightening data regulations.
